

Sidchrome SCMT50208 - Tool Chest 8 Drawer

Product Description

A tool chest you can rely on to keep your tools well organised, readily accessible and protected when not in use.

When your tool chest is organised, you save time and finish your projects faster. With every tool you need in a well-structured, readily accessible system, you won't waste precious moments searching for missing tools.

We understand that the best tool chests are customised to your specifications. That's why our collection of tool chests can be combined with our cabinet bases to create a custom solution to suit your daily usage requirements.

The heavy gauge steel construction means it's strong, sturdy and reliable, while the rolled-edge drawers deliver smooth, fast access. The drawer liners protect your tools while in storage and with 100% drawer access, you can be confident of maximising every square inch of space in your tool chest, which is great when working in close confines or in smaller workspaces. Each drawer is lined with EVA foam, which withstand most workshop fluids, helping keep your tools in top-quality condition.

The lockable cabinet means you can keep it safe from thieves, plus the upper central drawer is independently lockable too, giving you a place to keep private paperwork or assets locked while the rest of the chest is open.

The wide-grip handles make it easy to cart from space to space in your workshop or bring it in your ute to keep your entire collection with you on the road. It's UV resistant too, so if you're working outdoors or in a sunny workshop, your tools will be protected from the sun.

The chest is designed to fit atop our roller cabinets, giving you the freedom to create the custom solution that best suits your requirements.

Chest

- Width 663 mm
- Depth 335 mm
- Height 438 mm
