

## Sidchrome SCMT50207 - Roller Cabinet 7 Drawer

### Product Description

---

The heavy gauge steel construction means it's strong, sturdy and reliable, while the rolled-edge drawers ensure smooth, fast access when needed. The drawer liners protect your tools while in storage and with 100% drawer access, you can be confident of maximising every square inch of space in your tool chest, which is great when working in close confines or in smaller workspaces. Each drawer is lined with EVA foam, which will withstand most workshop fluids, helping keep your tools in top-quality condition.

The wide-grip handle on the trolley-style design makes it easy to cart from space to space in your workshop. It's UV resistant too, so if you're working outdoors or in a sunny workshop, your tools will be protected from the sun.

The cabinet is designed to fit beneath our tool chests, giving you the freedom to create the custom solution that best suits your requirements. The sturdy, non-slip rubber work mat provides a stable base for additional tool chests, or a convenient workspace for intricate projects where multiple tools are required.
