

## WD-40 21005 - Anti-friction Dry Ptfе Lubricant 150g

### Product Description

---

Need a high-performance anti-friction lubricant that can handle even the toughest jobs?

WD-40 Anti Friction & PTFE Lubricant is a PTFE spray lubricant that improves the life of everything from tools and machinery to car parts.

This Anti Friction Dry PTFE Lubricant is formulated with PTFE, polytetrafluoroethylene, also known as Teflon. This means it's non-stick, leaving behind a dry film that resists dirt, dust and oil. Plus it can work in most temperatures (from -40°C to +200°C) and on a variety of materials including metal, glass, vinyl, as well as most rubber and plastic surfaces.

Use Dry PTFE Lubricant for:

- Lubricating axles
- Lubricating power tool blades and drill bits
- Maintaining hydraulics
- Lubricating cranks and cogs
- Protecting hand tools
- Lubricating bushings, sliding tracks and conveyors
- Improving performance of wire ropes and pulleys

It is non-staining and because it dries quickly, it's especially effective for people who work with parts that are exposed to the elements like sign writers, panel beaters or spray painters or anyone who works with plastic, metal or glass.

With the Smart Straw applicator, you can either use the flip up straw for hard to reach areas, or flip it down to use the wide angle spray for coverage on wider surfaces.

This anti friction lubricant is an ideal addition to the garage, workshop, factory, or garden shed. Pick up a can today. You never know when you might need it.
