

Buckaroo CSEB44 - Miners Belt - 44" With Back Support

Product Description

- Backed by an extensive research study conducted in 2008, the Buckaroo Miner's Belt is the preferred belt for underground mining use. Teamed with the Buckaroo Shoulder Braces, the wearer receives added lumbar support. It has been recommended that for the wearer to receive muscular skeletal benefits such as reduction in hip and lower back discomfort, a Buckaroo Back Support Miners Belt should be available to underground workforces.
- Extensive materials testing was undertaken in the initial design stages to identify the best performance materials to use for the production of the Buckaroo Miners belt. Considering the exposure to harsh environments and given the nature of the type of work this belt is used under, we ensure there are no unsafe elements to the Miners Belt.
- Features include:
- No conductive materials
- 100% natural Australian Wool Felt padding is used to avoid irritations to the wearers skin. Natural wool felt breathes and is waterproof making it the ideal choice for more humid working conditions.
- Copolymer coated webbing upper belt strapping- a high performance material that has replaced leather in many industries due to its unique properties. A wholly Australian invention and made in Australia, copolymer is non toxic and will not stretch, crack, tear or harden if exposed to moisture, unlike leather.
- No aluminium used
