

## Scangrip SGMAGBRKTLG - Magnetic Bracket Large

### Product Description

The MAGNETIC BRACKET LARGE is an extremely powerful work light bracket designed for flexible mounting and positioning of the large work lights on any magnetic surface. It is now available in a new design.

The magnetic mounting bracket has 2 extremely powerful magnets with a holding force of more than 20 kg each, providing altogether a holding force equivalent to 420N.

The rubber-coated magnets protect and avoid scratching the surface and are very flexible as they are turnable and can be rotated to any desirable position. This means that the magnetic work light bracket can be used even if the magnetic surface available is limited.

The simple and one-hand-operated mounting bracket ensures fast and secure installation, and the lamp can be tilted to any position required in the daily work. A built-in stop mechanism avoids the work light from falling out of the bracket. Press the button to release.

For the minor work lights, we recommend using the small MAGNETIC BRACKET item no. 03.5390 with half the holding force.

**Specifications**

- 260 x 40 x 53 mm
- 780 g
- Holding force for 2 magnets 43 kg
- Equivalent to 420N
