

## Cabac HNKE10 - Bootlace Crimper 0.75 - 10mm<sup>2</sup> Dieless

### Product Description

---

#### Die-less Bootlace Ferrule Crimper 0.75-10MM<sup>2</sup>

- The HNKE10 tool is the mid range tool in the die-less tool range, covering 0.75to 10mm<sup>2</sup>.
- The principal of the tool is that it has four faces that simultaneously move inward as the tool is closed, creating a square crimped pin with serrations. This action creates a self adjusting tool, which crimps over a large range.
- To crimp, simply insert the ferrule and squeeze the handles, and the tool does the rest. The tool is ratchet controlled for crimp consistency, and the ratchet has 9 adjustment positions, to compensate for tool wear.
- NOTE: Please ensure this tool is well oiled to ensure correct operation.
- Length: 170mm
- Weight: 360g
